

Acrylic Lecterns

Acrylic is strong but it is by no means indestructible!

Please take care when handling and using acrylic lecterns.

Lift by gripping the sides. Do not lift by from the read-bed.

When putting down place the lectern carefully, flat on the floor to avoid stressing the corners.

Clean/polish only with Novus1 cleaning fluid and a clean dry cloth. Novus1 is designed specifically for acrylic and will remove dirt and reduce static cling without damaging the acrylic surface.

Do not use solvents or abrasive cleaners.

Remove vinyl graphics immediately after use with a blunt plastic object or fingernail.

Pack the lectern carefully in the transit case when not in use.

Always transport in the upright position.

Secure the case in the upright position using load straps when in transit.

Avoid using Gaffa tape on the lectern. It is the hirers responsibility to ensure the lectern is returned in good order and free from tape and adhesive residue.
